

Audit Log

The Audit Log shows **who did what, and when** in the panel. Use it to trace the source of a settings change, review coupon usage, or investigate a suspected unauthorised access.

“ How do I open this screen? From the left menu, go to **Analytics and Reports** → **Audit Log**.

Note: the filters and column headers on this screen are still shown in Turkish; the on-screen text is given in brackets.

Scope: this page shows the actions of the **currently selected device only**. To view another location's records, switch to that device from the **Device Selection** screen first.

Filters

- **Operator** (*Operatör*): the panel user who performed the action. Choose *Tümü* (all) or one of the listed email addresses.
- **Action** (*İşlem*): filters by action type. Recorded types include:
 - `captive_portal_update` — captive portal settings updated
 - `coupon_check` — coupon looked up
 - `coupon_redeem` — coupon marked as redeemed
 - `device_create` — a new device added
 - `list_logs` — the 5651 log list viewed
 - `menu_report`, `otel_report`, `retail_report` — module reports retrieved
- **Device** (*Cihaz*): locked to the open device and cannot be changed.
- **IP**: filters actions coming from a specific IP address — useful when you suspect a sign-in from an unexpected location.
- **Time** (*Zaman*): *last 1 day*, *last 7 days*, *last 30 days*, *last 90 days* or *last year*.

Once you have made your selection, press **Filter** (*Filtrele*). The result count appears above the table as "0 records shown".

Table columns

- **TIME**: the date and time of the action.
- **OPERATOR**: the user who performed it.
- **ACTION**: the type of action.
- **TARGET**: the record it was applied to (for example a coupon code or a portal setting).
- **DEVICE**: the device the action was performed on.
- **IP**: the originating IP address.
- **DETAIL**: additional information about the action.

If nothing matches the filter, the page shows "No records found."

“ **In practice**: to answer "why did the portal design change?", set Action to `captive_portal_update` and Time to *last 7 days* — the operator and the timestamp appear straight away.

“ **Related pages**: **Settings → Administrators** (last login and IP), **Settings → Administrator Profiles** (narrowing permissions).
