

My Profile (Account Info)

The My Profile (Profilim) screen is where the signed-in user manages their own account: personal and company details, panel language, password and two-factor authentication. To manage other users, use **Settings → Administrators**.

“ How do I open this screen? Choose **My Profile (Profilim)** from the account menu at the top right.

Yardım | Şartlar | Gizlilik

1. My details (Bilgilerim)

- **First name (Ad)** and **surname (Soyad)**.

- **E-mail (E-Posta):** The address notifications are sent to.
- **Panel Language:** *Türkçe* or *English*. Applies immediately and on every sign-in.
- **Company address (Firma Adresi):** Used as the party address on contracts.
- **KEP address (KEP Adresi):** Registered electronic address for legal notices in Türkiye. Optional.
- **Mobile phone (Cep Telefonu):** The **Verify (Doğrula)** button sends a confirmation code to the number. The screen states which number is currently verified; to change it, enter the new number and press Verify again.
- **Username (Kullanıcı Adı):** Your sign-in identity. It **cannot be changed**.

Changes are written with **Save (Kaydet)**.

2. Change password (Şifre Değiştir)

Three fields: **current password**, **new password** (at least 8 characters) and **new password again**. **Update password** applies the change.

3. 2FA management

Two-factor authentication (an Authenticator app) hardens your account. The tab states whether it is currently active.

If you have changed phone or lost access to your Authenticator, you can reset and set it up again:

1. Enter your password in the **current password (verification)** field.
2. Tick the **I confirm I want to reset 2FA** box.
3. Press **Reset 2FA**.

After a reset you are asked for a **new QR code at your next sign-in**, which you scan into the Authenticator app again.

4. API keys

The tab where tokens for REST API access are generated — documented on its own page.
