Menu Studio

What is it for?

Menu Studio is where you change how your menu looks, working on a phone view. Your live menu sits in the middle (*Useroam Cafe · Editing mode*); you can tap a product name or price and type directly, and changes save by themselves. The strip on the left chooses the style, layout, background and price display. For detailed fields (translation, portions, sale hours) use the Menu Editor.

> **How do I open this screen?** Click ◫ **Studio** at the top of the Menu Editor.

When do I use it?

- To change your menu's colour, font and general style.
- To show products in one column, two columns or with large photos.
- To use your phone as an editor and change names, prices and stock quickly.

Before you start

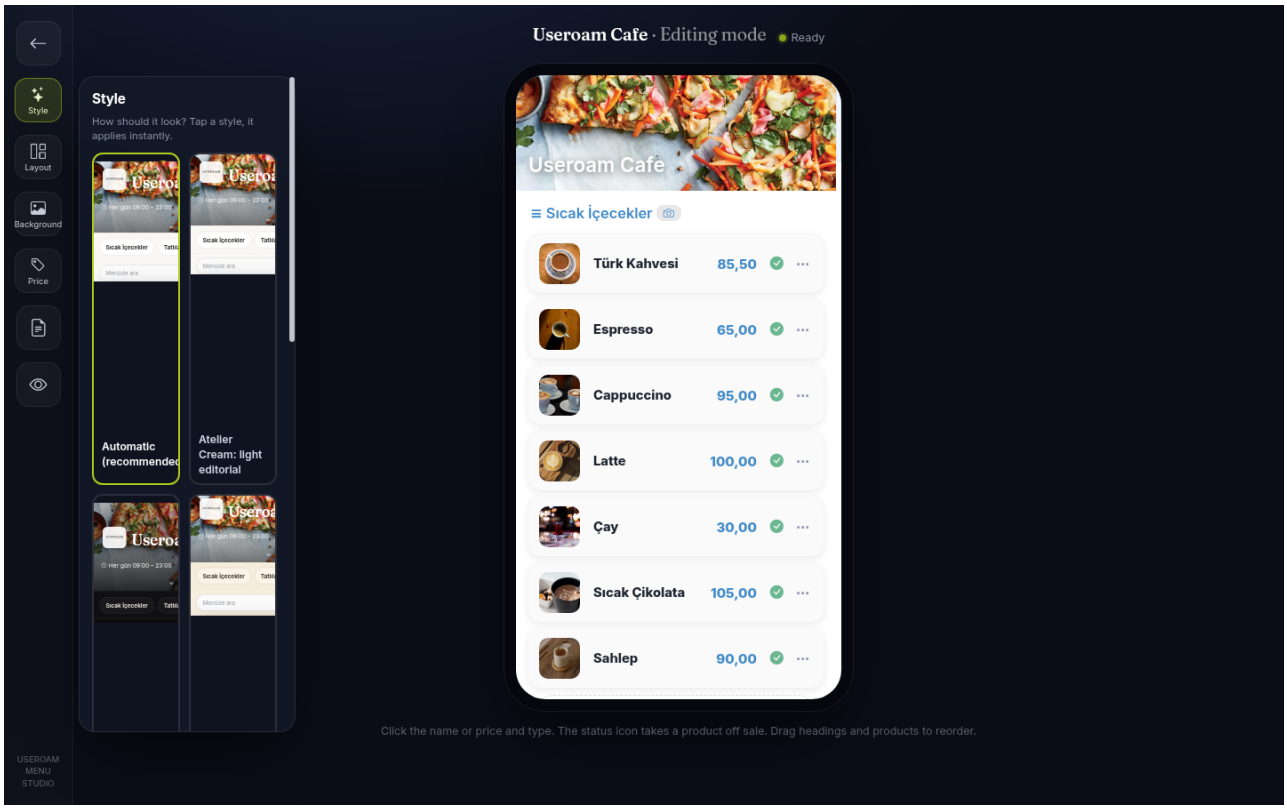

- Everything you choose in the Studio is **applied to the published menu immediately**; there is no separate Save button. A green dot and **Ready** at the top show it was saved. If you pick something by mistake, click **Undo**.
- The first time you open it a short tour appears (*The phone is the editor*, *Theme*, *Classic editor*).

Left strip

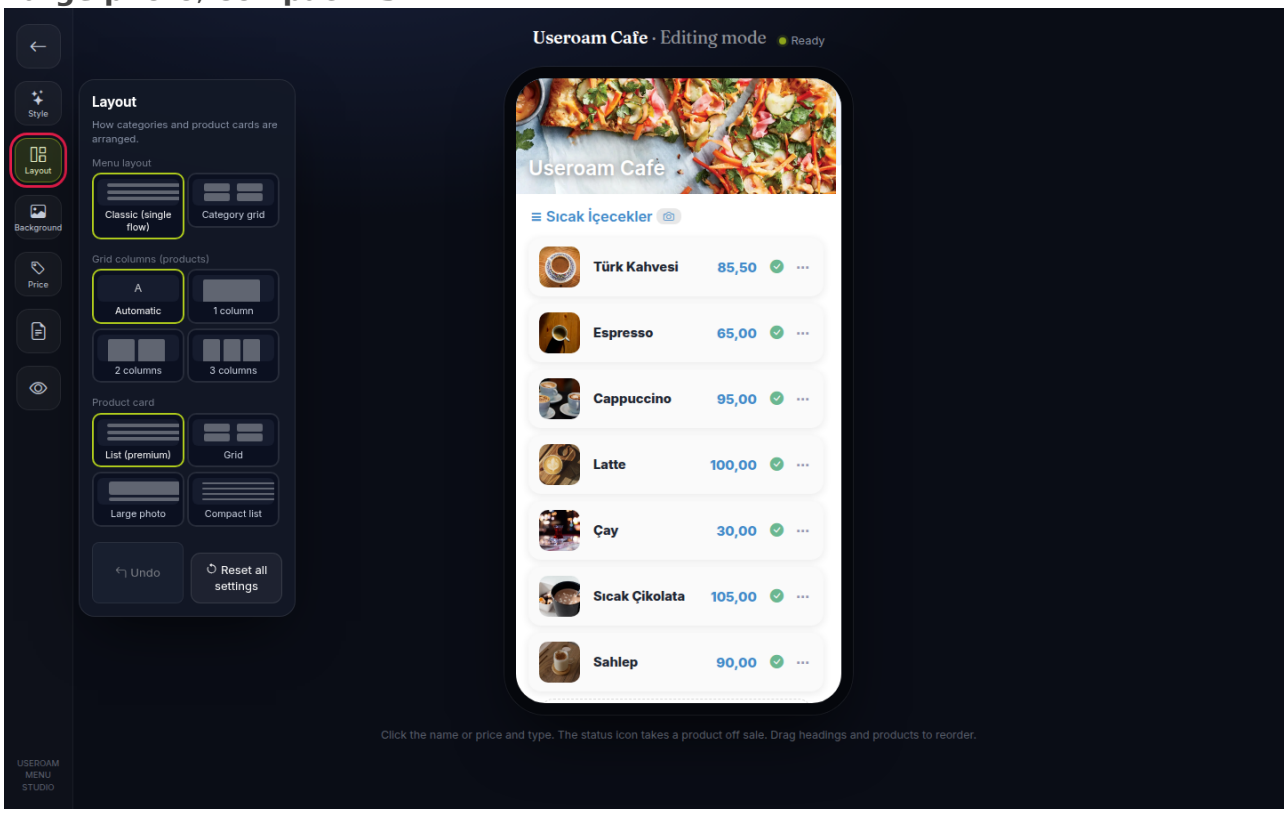

Button	What it does
Back arrow	**Back to classic editor**: opens the Menu Editor.
Style	"*How should it look? Tap a style, it applies instantly.*" Ready styles plus colour and font.
Layout	"*How categories and product cards are arranged.*"
Background	"*Background, pattern and button appearance.*"
Price	"*Currency, decimal display and service mode.*"
Document icon	**Import PDF (classic)**: opens the Menu Editor, where the import tools are.
Eye icon	**Live menu**: opens the guest page in a new tab.

Step by step

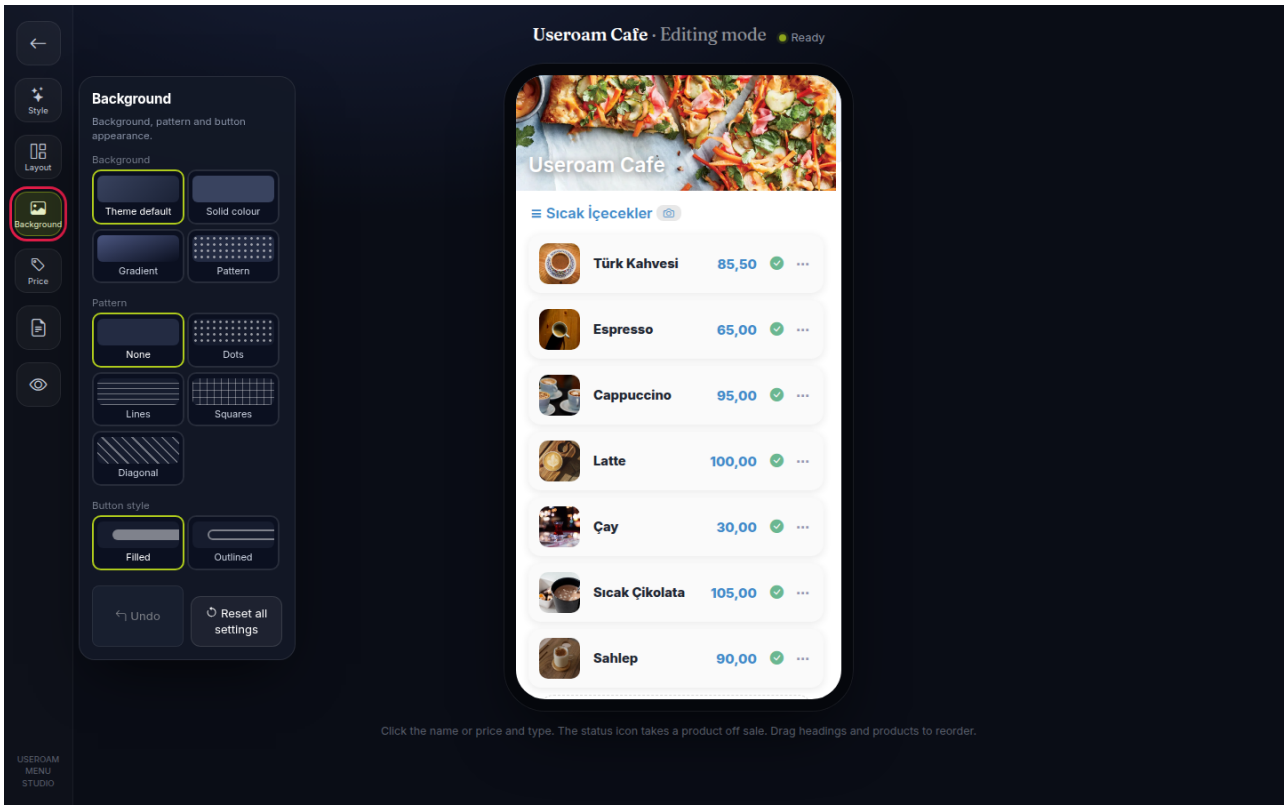

1. Click **Style** and tap a tile. Each tile is a live view of your own menu: **Automatic (recommended)**, **Atelier Cream: light editorial**, **Night · Noir: dark, centered**, **Hearth: kraft, restaurant menu**, **Vivid: bright, large photo**. It is applied to the published menu and your brand colour is kept. The same section has **Secondary accent colour** and **Font** (**Theme font** or another font).

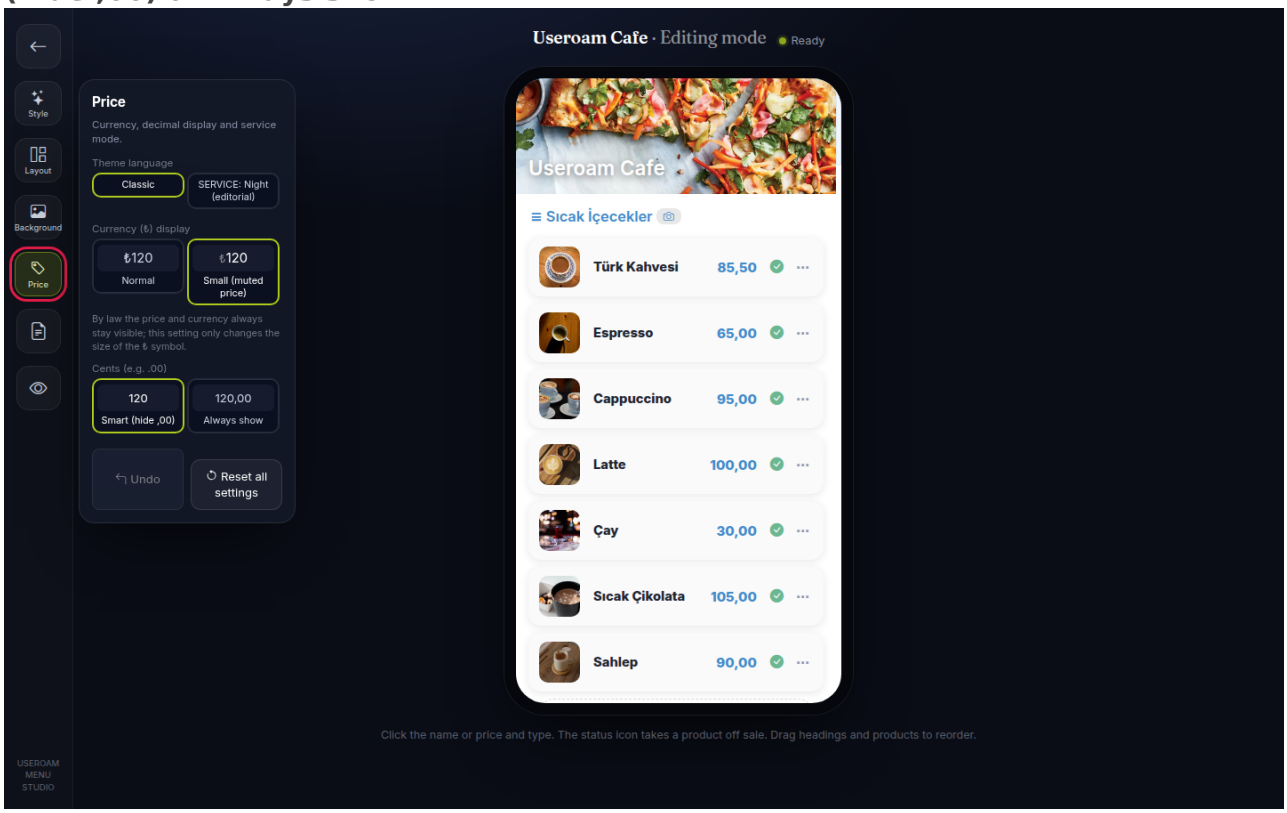

2. Click **Layout**. **Menu layout**: **Classic (single flow)** or **Category grid** (categories show as cards; products appear after a category is opened). **Grid columns (products)**: **Automatic**, **1 column**, **2 columns**, **3 columns**. **Product card**: **List (premium)**, **Grid**, **Large photo**, **Compact list**.

3. Click **Background**. **Background**: **Theme default**, **Solid colour**, **Gradient**, **Pattern**. **Pattern**: **None**, **Dots**, **Lines**, **Squares**, **Diagonal**. **Button style**: **Filled** or **Outlined**.

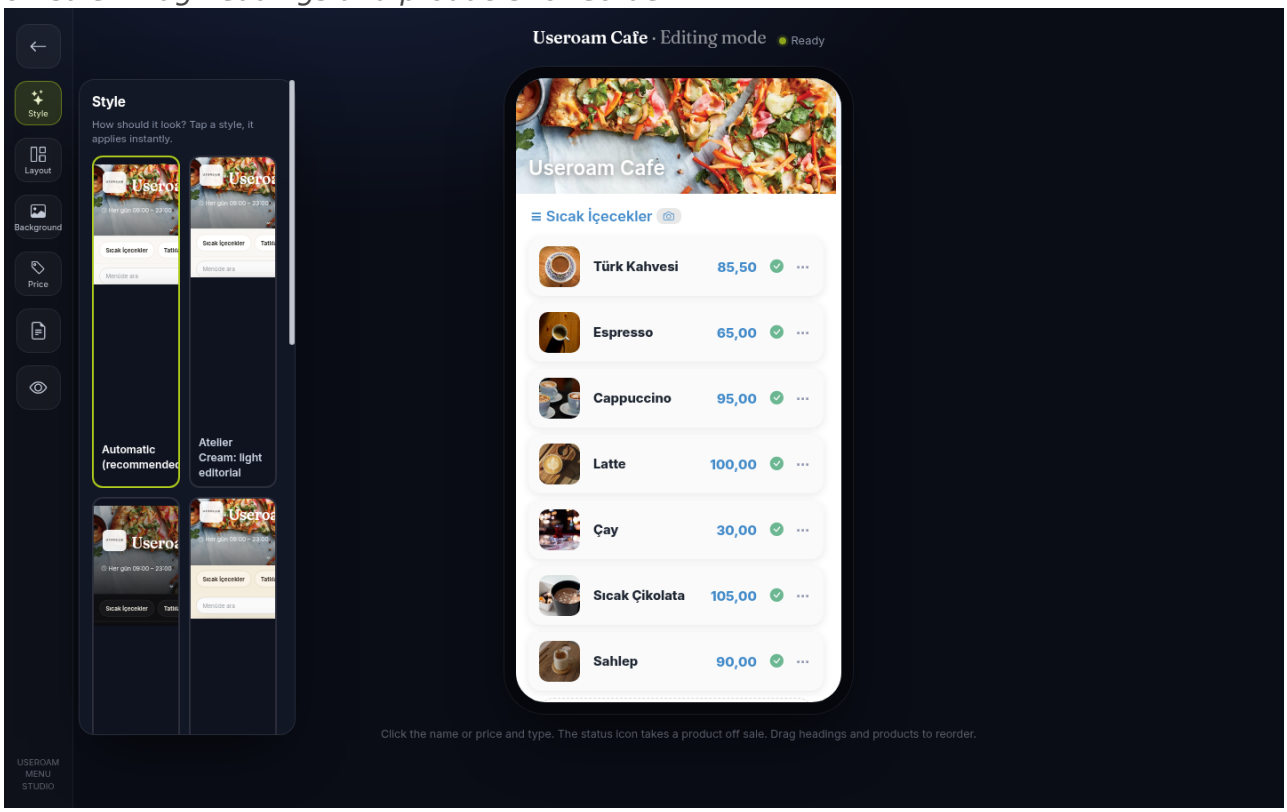

4. Click **Price**. **Theme language**: **Classic** or **SERVICE: Night (editorial)**. **Currency (₺) display**: **Normal** or **Small (muted price)**; note: "*By law the price and currency always stay visible; this setting only changes the size of the ₺ symbol.*" **Cents (e.g. .00)**: **Smart (hide ,00)** or **Always show**.

5. Change products on the phone in the middle: click the name or price and type, tap the green status icon to switch a product between **in stock / sold out**, use the three dots for **All details** (label, portion, video; opens in the classic editor), use the camera next to a section title to add a **Section image** (upload or free suggestion), and drag headings and products to reorder. At the end of the list are **+ add product** and **+ new section**. The

hint under the phone: "*Click the name or price and type. The status icon takes a product off sale. Drag headings and products to reorder.*"

Under every section there are **Undo** (reverts the last change) and **Reset all settings** (returns the Studio settings to the design's defaults).

On an empty menu

For a menu with no products, the Studio starts like a chat: "*Let's build your menu together. What kind of business do you run?*" Options: **Cafe**, **Restaurant**, **Fast Food**, **Patisserie**, **Bar**, **Tea Garden**. Then it says "*If you have a PDF menu, drop it here and we will import the content automatically.*" with a **Drag or choose a PDF file** area. When adding a photo, the **Add photo** window offers **Upload my own photo** or **Suggest a free image** (Openverse, CC0 / public domain). The demo menu is not empty, so there is no picture of this state.

Other on-screen texts

The hints, counters, waiting and status texts below appear on screen as written (numbers and names are examples; "..." is replaced with your data).

- *In category grid, products appear after you open a category; column and product card settings apply there.*

- *Change cover photo*
- *Section image (upload / free suggestion)*
- *Tap: photo*
- *Tap: in stock / sold out*
- *Free images*
- *Openverse · CC0 / public domain. If none fit, upload your own photo.*
- *This phone is your live menu. Tap a product name or price and type directly; it saves automatically.*
- *Tap the colour palette and your menu instantly takes on the new theme.*
- *Go back to the classic editor for detailed fields (translation, variants, sale hours).*

Frequently asked questions

How do I save?

You do not need to; each choice is saved at once and shows on the guest menu. **Ready** at the top confirms it.

Are Design in Menu Settings and Style in the Studio the same?

Design (Kafe, Restoran…) chooses the starting theme; Studio style, layout and background settings are applied on top of it. **Reset all settings** clears the Studio settings; the design stays.

Why are products hidden with Category grid?

With this layout guests see categories first, and products open when they enter a category. Column and product card settings apply there too.
